WORK EXPERIENCE

NOKIA Networks

2019 - Present

Software Engineer

I worked on developing, configuring and deploying Nokia products on customer servers. My everyday work as a developer involves the FlowOne solution: InstantLink, Catalog modules and BST frameworks. I developed and ran tests (unit, integration and system testing) for the product before going live. I have managed and developed SQL scripts, SQL queries for an existing MariaDB Database based on project specifications. I also configured small Java scripts for different project requirements.

Termita Impex

2014 - 2017

Architect

I have worked as a full-time architect, involved in working with clients and doing architectural design.

EDUCATION

Politehnica University of Timisoara
