## WORK EXPERIENCE

**NOKIA Networks**                                                                                   **2019 - Present**

*Software Engineer*

FlowOne Fulfillment solution - Vodafone Italy.
I work on developing, configuring and deploying Nokia products on customer servers.
My everyday work as a developer involves mostly FlowOne Solution: InstantLink, CATALOG and BST frameworks. I also developed and run tests (unit, integration and system testing) and use SoapUI and TAF testing for the product before going live. I managed and developed SQL scripts, SQL queries for an existing MariaDB Database based on project specifications. I also configured small Java scripts for different project requirements.

**Termita Impex**                                                                                         **2014 - 2017**

*Architect*

I have worked as a full-time architect, involved in working with clients and doing architectural design.

## SKILLS

Html  ●  Css  ●  SCss  ●  Bootstrap  ●  MaterialUI  ●  Javascript  ●  React  ●  Git  ●  SQL  ●  Linux
●  Low-Level Design  ●  Unit Testing  ●  SoapUI  ●  OOP  ●  CI/CD  ●  Agile/Scrum  ●  Jira

## EDUCATION

**Politehnica University of Timisoara**                                                             **2017-2021**

Bachelor's degree, Computer Engineering

*Relevant project:*

Smarthome app: A GUI through which a user loggs in and controls his home appliances (heat, A/C, etc.) and gets relevant info. (temperature graphs, run time, etc.)

**Technical University of Cluj Napoca**                                                             **2009-2015**

Bachelor of Architecture - BArch, Architecture

**High School, Colegiul National "Dragos-Voda" - Sighetu-Marmatiei**          **2005-2009**

Baccalaureate, Mathematics and Computer Science

## CERTIFICATION

**IT School** - Ongoing                                                                           **2022 (6 month)**

Web Development Bootcamp. The course consists of 40 live sessios that amounts to a total of 100 hours. The program covers: HTML CSS SCSS BOOTSTRAP NODE JAVASCRIPT REACT GIT
